7	17
6	16

**HOW TO MEASURE**

Our measuring device is designed for your child to be seated, because it is easier to get a more accurate size. Feet are longer in the standing position, we have taken this into account. Please do not add room for growth as we have taken this into account in the above measuring device.

- 1 Measure both feet from heel to longest toe, use the longer foot size.
- 2 The heel should rest inside the 90 degree angle along the baseline as shown below.
- 3 The size region where the longest toe falls is the correct size. If the toe hits the top of the size box, use the next size up.

Place child's heel along this base line
